NEW FOR 1983

WELCOME TO THE WONDERFUL WORLD OF LIVE STEAM

NEW FOR 1983

WORKING MODEL STEAM CRANE

NOW IN PRODUCTION

During the period of the Industrial Revolution the technology of the industrial countries of the world depended upon steam power. The steam engine in all its forms — on the railway, at sea, on the road, in the factory and on the farm, was to become the driving force for man's insatiable quest for prosperity and well being. With the invention of electricity and the internal-combustion engine the widespread use of steam power was soon to decline. Today these steam engines are to be found only in steam museums, as dead, lifeless pieces of machinery, relics of a bygone age.

To fully appreciate steam engines you have to see and hear them working under live steam. Perhaps you yourself remember your first ride as a child on a steam train. The smell, the sound, the excitement when the train moved off. Perhaps you wondered how all that power could come from fire and water. Most of today's youngsters regrettably are not able to have these experiences. Now you can bring back those memories and share them with your children and grandchildren in the comfort of your own home, with this safe efficient live steam crane, handcrafted in metal for long troublefree operation.

Simple to operate and great fun for kids of all ages, this live steam crane is the latest and most advanced of a number of different models produced over a period of 16 years full-time work in this field. During this period over 5,000 models have been manufactured and sold New Zealand wide.

To ensure complete safety when being used by new inexperienced operators especially youngsters, the steam crane is fitted with a Silver (Hard) Soldered boiler which will NOT be damaged if run dry of water. Silver Soldered boilers are a feature usually only found in more sophisticated and expensive steam models selling for hundreds of dollars. As an additional safety feature, the boiler is also fitted with a safety valve.

GUARANTEE

As I manufacture all components myself, I will personally guarantee all models against faulty materials or bad workmanship for 12 months from date of purchase. Within this period I will eliminate defects due to materials or workmanship without charge for parts or labour. Damage due to misuse, tampering and accidental damage is not covered by this guarantee. If on receiving your model you are not fully satisfied I will refund the full purchase price. Models must be returned within 14 days in un-used condition, and packed in the same outer container as received to prevent damage in transit.

The first production run of 100 steam cranes is now finished and available for immediate delivery. A further batch of 200 steam cranes will be available at the end of November in time for Xmas. Order forms for immediate delivery and end November delivery are enclosed. During 1983 the new steam crane will be available by mail order at the Special direct to customer discount price listed. This Special discount price is for New Zealand customers only.

This new steam crane is a model that could give you pleasure just to own and look at, but the real enjoyment will come with running it and experiencing the realism, the sight, sound and smell of a real live steam model.

In today's world the computer is king, but the KING of yesteryear LIVE STEAM still holds tremendous fascination for young and old alike. I know you too will be as fascinated with this new working model steam crane as the many thousands of my other satisfied customers. I give my guarantee you won't be disappointed.

Yours faithfully,

David A. Auld
